

*“Our plant air package has really caught on, and sales are booming.”*

In 1962, Elliott introduced a groundbreaking new product that became one of its most successful. The Plant Air Package, or PAP, was a small centrifugal air compressor package that supplied oil-free compressed air for industry. Elliott's PAP had several distinct advantages over the reciprocating air compressors then offered by other manufacturers – a smaller footprint, lower maintenance costs and quieter operation. Before selling the product line in 2003, Elliott built and sold 3,800 PAPs. Many of them are still in operation today.

*In 2010 we celebrate the 100th anniversary of the foundation of the original Elliott Company.*

*As we commemorate this centennial, we are pleased to share with you a series of significant events from each of Elliott's first 10 decades.*
